Eze Christopher Onyebuchi

Full-Stack Web Developer

Lagos, Nigeria | +234 814 437 9877 | ezeonyebuchi260@gmail.com | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Full-stack web developer who builds and deploys complete applications, from React front ends to Node.js, Firebase, and Supabase back ends, using AI-assisted development. Built three projects between April and July 2026: an AI-powered lost-and-found platform with five user roles, a role-based academic result management portal, and an e-commerce store with Paystack payments. Hands-on with authentication, role-based access control, payments, and deployment, with IT support experience from industrial training.

TECHNICAL SKILLS

- **Front End:** HTML, CSS, JavaScript, React (Vite), React Router
- **Back End and APIs:** Node.js, Express, REST APIs, Paystack integration
- **Databases:** Firebase Firestore, Supabase (PostgreSQL)
- **Authentication and Security:** Firebase Auth, protected routes, role-based access control, Firestore Security Rules, rate limiting, Helmet
- **Cloud and Deployment:** Vercel, Render, Netlify, Firebase Hosting, Cloudinary, Firebase Cloud Messaging
- **AI Integration:** Jina CLIP v2 and Hugging Face Sentence-BERT embeddings (via API)
- **Tools and Practices:** Git, GitHub, collaborative branching, AI-assisted development
- **Currently Learning:** Python, AI automation

PROJECTS

Recova — AI-Powered Campus Property Management and Identification Platform (Full-Stack Developer) April 2026 – July 2026

Live site | GitHub

Technologies: React (Vite), Node.js, Express, Firebase Firestore, Firebase Auth, Cloudinary, Firebase Cloud Messaging, Nodemailer, Jina CLIP v2, Hugging Face SBERT, Vercel, Render

- Designed and built a three-tier application with a React front end on Vercel and a Node.js/Express API on Render, serving five role-based interfaces (student, lecturer, business owner, visitor, admin).
- Built a server-side AI matching pipeline that combines image similarity and two text-similarity signals into one weighted score, sending matches above 0.70 to admin review and auto-approving those above 0.90.
- Implemented authentication and access control with Firebase Auth, matric-number-locked student registration, custom-token sessions for unregistered visitors, server-side admin role checks, and Firestore Security Rules.
- Hardened the API with rate limiting, Helmet, input sanitization, and CORS restrictions; added real-time chat, push notifications, and email alerts.

Physics Portal — Academic Result Management System (Full-Stack Developer, final-year project) April 2026 – July 2026

Live site

Technologies: React 18, Vite, Firebase (Auth, Firestore, Storage, Hosting), Vercel

- Built a role-based portal for students, lecturers, unit admins, and a super admin across three programs (ECT, GEO, PHY), covering course registration, result upload, review, publishing, and CGPA reporting.
- Implemented a multi-stage result approval workflow (lecturer draft, submission, admin review with grade-distribution charts and CSV export, publication) so students only see published results.
- Built the grading engine: CA 30% plus Exam 70% on a 5-point scale, CGPA and degree classification, credit-limit enforcement, and carryover locking.
- Secured staff access with passkey-gated registration, super-admin approval, session limits, idle timeout, audit logging, and Firestore Security Rules.
- Modeled about 20 Firestore collections and set up Vercel auto-deploy on git push with Firebase Hosting as a backup.
- Built an AI academic advisor with a local knowledge base of 81 intents (English and Nigerian Pidgin support) and a reading-schedule generator.

HomeBasics — E-Commerce Platform (Co-Developer) April 2026 – July 2026

Live site | GitHub

Technologies: React, Vite, Supabase (PostgreSQL), Paystack, Git, GitHub

- Co-built a full-stack e-commerce platform for the Nigerian market with retail, wholesale, and members-only pricing, collaborating through Git and GitHub.
- Designed the system architecture and application layout, and built the admin dashboard layout.
- Designed the payment flow using Paystack for card payments and order confirmation.

- Implemented protected routes to restrict access to authorized users.

INDUSTRIAL TRAINING

IT Support Trainee — Genuss — Lagos, Nigeria February 2025 – September 2025

- Performed operating system installations and basic system repairs as part of day-to-day IT support.

EDUCATION

B.Sc. Electronics and Computer Technology (Department of Physics) — University of Calabar, Nigeria
Graduated: 2025/2026 session (certificate pending)
Relevant coursework: Computer Programming, Computer Fundamentals, Computer Technology I and II, Computer Networking, Computer Maintenance

TRAINING

- AI Fluency: Framework and Foundations, Claude Academy (Anthropic), course completion badge, October 2026 — Verify badge
- AI automation (self-study, in progress)
- Python (learning)
